

Latin American Real-World Clinical Data Platform

Latin America is a Vital Market for Pharma

450 M people
33 countries

\$74 B in pharma
revenue

12% of the US
market value

Pharma's Challenge in Latin America

Clinical Execution Gaps

Wrong **site selections**

6–12 months trial delays

→ **30% higher cost/patient**

Commercial Decisions

Lack of real world data

→ Data blind spots lead to **millions in misallocated marketing dollars**

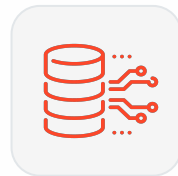

Cause of Latin America Data Challenges

Fragmentation

Access
Barriers

Data Silos

Lack of
Standardization

Cromodata: LatAm RWD Data for Pharma

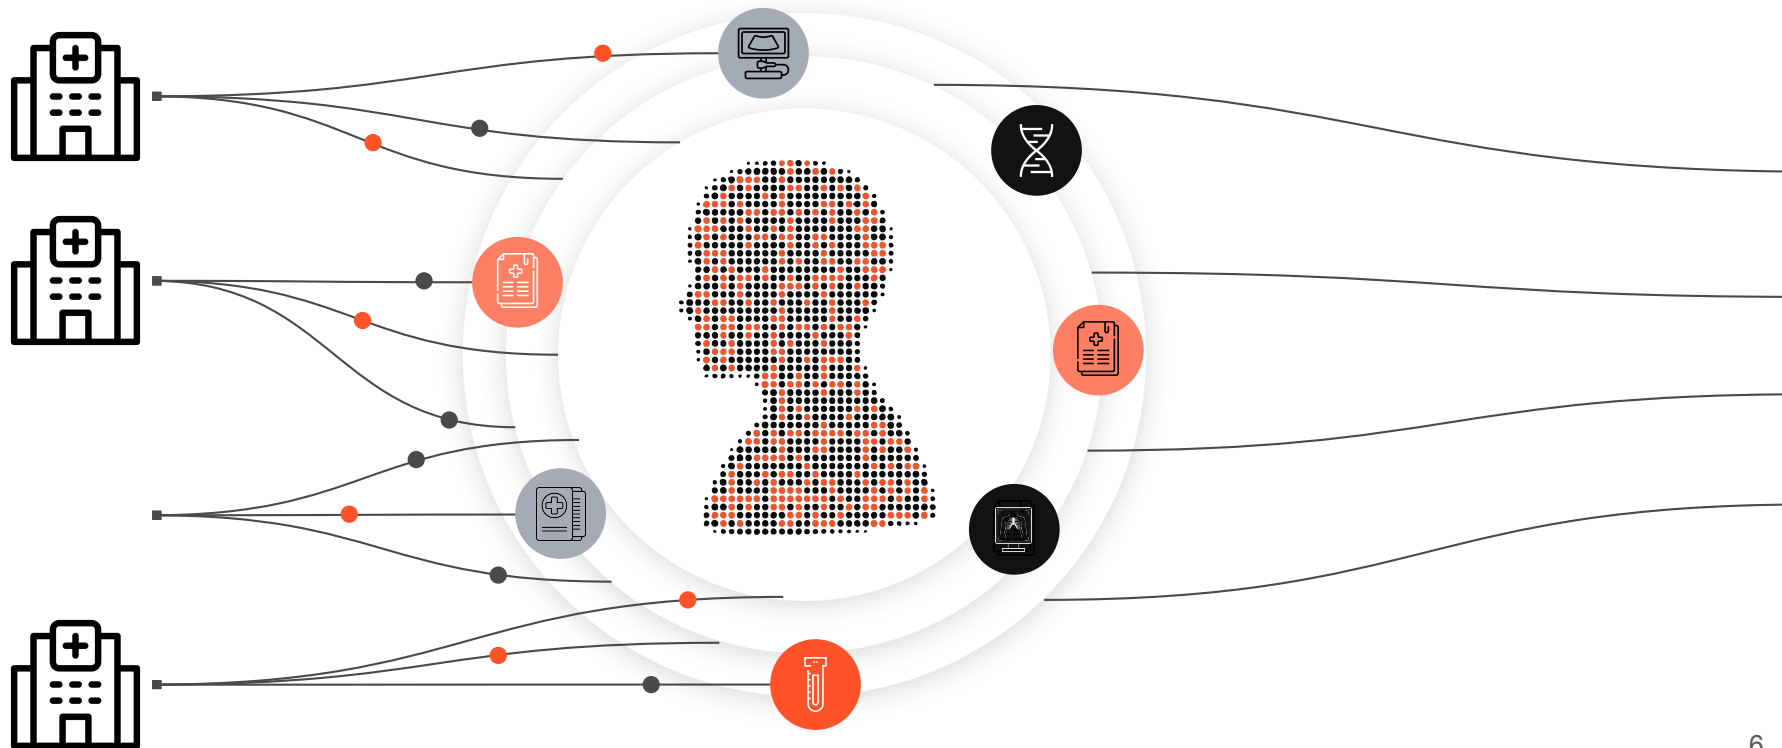

LatAm

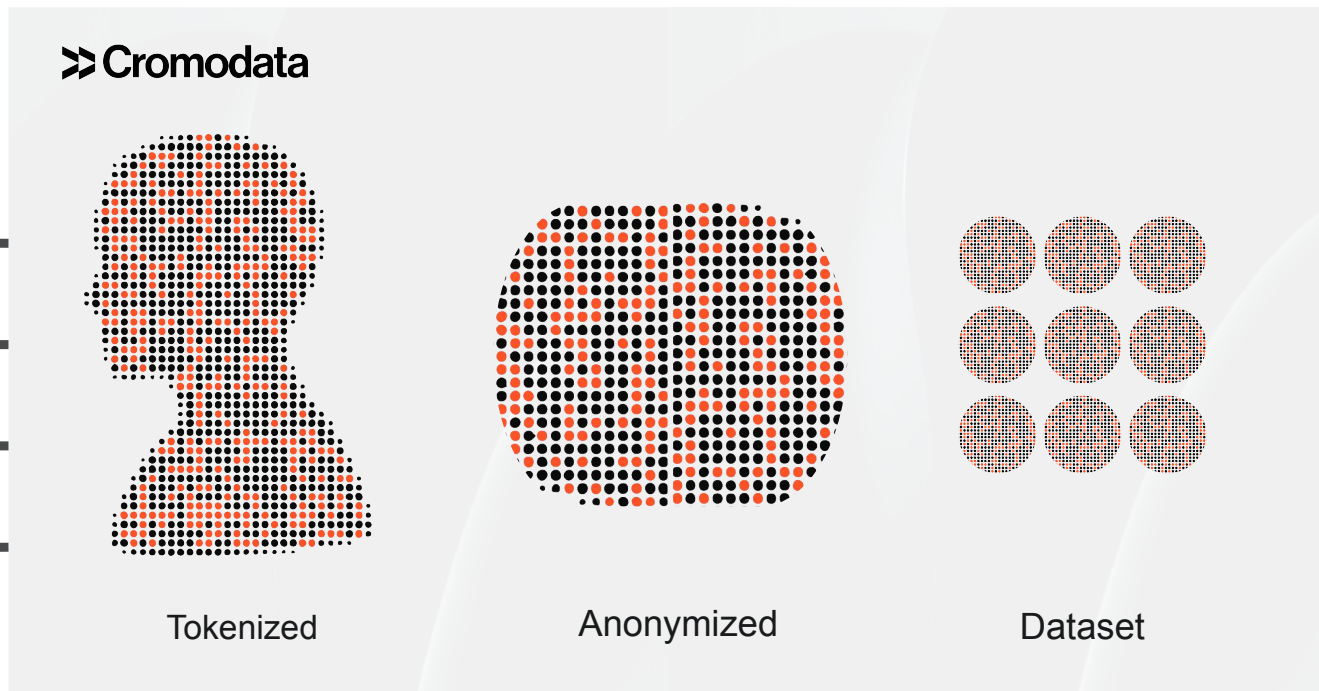

- 47 Hospitals
- 5 countries
- 20 million patient records

Expanding to **100+ hospitals** with **Genomics & Rare-Disease RWD**

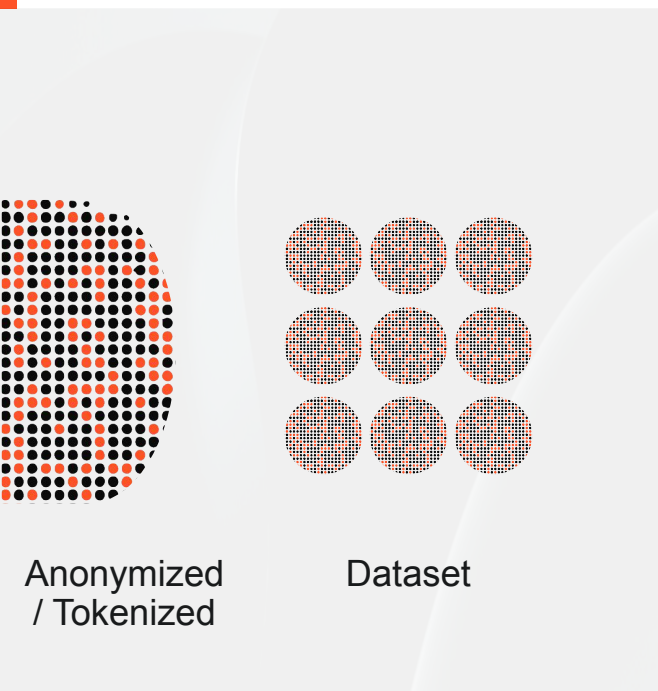

Cromodata Collects and Tokenizes Patient Data from Disparate Sources

Cromodata creates tokenized, anonymized data sets for longitudinal studies

Benefits of Cromodata's RWD

» Cromodata

Faster trial site selection

Accelerated regulatory submission

Improved market access

Effectively targeted marketing investments

Regulatory Excellence

Built for Global Pharma
Standards

Patient Privacy & Security

HIPAA & GDPR compliant

Process Quality

Complete Audit Trail

Data Governance

Clients: Medical Device, AI, and Pharma

Medical Device Companies

- Real-World Evidence
- Strategic marketing
- Evidence of actual use of the device

AI & Biotech Companies

- Train predictive models
- Identify LATAM medical needs
- Accelerate drug development

Global Pharma Companies

- De-risk LATAM market entry
- Optimize site selection
- Accelerate cohort validation

Case Study - Non-Small Cell Lung Cancer

Challenge

- Wanted to identify patients who had received a specific drug
- Oncology centers in Argentina & Uruguay

Cromodata's AI

- Scanned and analyzed Medical Records
- Drug use detected
- Estimated patients treated

Impact

- Clear visibility of patients' reactions to the use of a specific drug

Engagement Opportunity

Access all data sets instantly through our Marketplace

Data Access / Licensing

Tiered pricing per dataset
(study, report, patient)

Clinical Trial Site Selection

Project-based pricing or
success fee or dataset
delivered

Enterprise Agreement

Subscription-based model

Cromodata: Pharma's Latin American RWD Platform

Pharma LatAm Opportunity:

Cromodata x AstraZeneca

Focus: Oncology (site selection + cohorts RWE LATAM)

Objective

Accelerate oncology clinical trials in Latin America by finding high-yield trial sites and validating eligible patient cohorts ahead of activation.

AstraZeneca Contributes

- Trial protocol criteria and recruitment targets.
- Definition of priority tumor types and biomarker profiles.
- Feedback loop on site performance.

» Cromodata provides

- Anonymized oncology imaging + pathology + EHR data from 47 hospitals across 5 LATAM countries.
- Cohort validation based on AstraZeneca's inclusion/exclusion criteria (e.g. stage, biomarker status, line of therapy).
- Feasibility Sprint (2–3 weeks) to rank sites by historical patient volume and data completeness.
- Ongoing delivery of RWE to support regulatory / market access narratives in the region.

Cromodata x ALEXION

Focus: Rare / ultra-rare diseases

Objective

Identify and characterize small, highly specific rare-disease populations in LATAM to support trial planning, post-approval evidence, and natural history studies.

Alexion Contributes

- Clinical definitions for target phenotype, diagnostic codes, lab thresholds, progression markers.
- Priority list of rare indications to scout first.

» Cromodata provides

- Longitudinal, multimodal real-world data (EHR, labs, imaging) from patients with low-prevalence and metabolic / immunologic conditions.
- Cross-country aggregation — allows Alexion to see where rare cohorts actually exist and at what scale across LATAM.
De-identified case histories suitable for natural history / burden-of-illness analysis.
- Traceable audit trail and compliance (HIPAA/GDPR/ISO-aligned).

Cromodata x ALEXION

Focus: Rare / ultra-rare diseases

Engagement Model & Timing

Feasibility Sprint

Confirm patient counts and geographic distribution (fixed-fee).

Data Access / Licensing

Curated rare-disease datasets (tiered per patient / per cohort).

Enterprise Agreement

Optional continuous rare-disease surveillance across LATAM (annual contract).

Cromodata x AstraZeneca

Focus: Oncology (site selection + cohorts RWE LATAM)

Engagement Model & Timing

Pilot

Feasibility Sprint for 1–2 tumor types in ~3 weeks (project-based fee).

Scale

Clinical Trial Site Selection package across multiple countries (success-fee / per-site model).

Ongoing

Enterprise Agreement for continuous oncology RWE access (annual subscription with SLA).

Cromodata x

Novo Nordisk: Metabolic (NASH / fatty liver / obesity / diabetes)

Objective

Enable faster NASH / metabolic trial execution in LATAM by validating patient pools and prioritizing high-yield recruitment sites.

Novo Nordisk Contributes

- Clinical definitions for target phenotype, diagnostic codes, lab thresholds, progression markers.
- Priority list of rare indications to scout first.

➤ Cromodata provides

- Large volumes of imaging (CT / MRI / liver ultrasound) + labs (ALT/AST, fibrosis markers) linked to metabolic comorbidities (obesity, T2D).
- Country-by-country map of recruitable NASH candidates that fit trial criteria.
- Clinical Trial Site Selection: ranking of hospitals with proven patient volume and operational reliability.
- Ongoing RWE to support real-world outcomes and market access post-trial.

Novo Nordisk: Metabolic (NASH / fatty liver / obesity / diabetes)

Engagement Model & Timing

Step 1

Confirm patient counts and geographic distribution (fixed-fee).

Step 2

Expansion to regional recruitment network (multi-country package).

Step 3

Enterprise Agreement for continuous metabolic / NASH RWE delivery (annual subscription with SLA and volume tiers).

Cromodata x Genmab

Genmab: Immuno-oncology / response to biologic therapies

Objective

Support biomarker strategy and responder profiling by providing deep, real-world oncology data (imaging + labs + treatment history) from LATAM.

Genmab Contributes

- Definition of target indication(s), biomarker(s), MoA focus and responder criteria.
- Desired endpoints (e.g. ORR, PFS-like surrogates, immune-related toxicity patterns).

➤ Cromodata provides

- De-identified longitudinal oncology cases including therapy lines, response indicators, adverse events, and follow-up imaging.
- Cohort slices for specific biologics / antibody-based regimens.
- Rapid turnaround (≈2 weeks) to test feasibility of a new responder-enrichment strategy in a given cancer type.
- Regulatory-grade QA and audit trail suitable for submission discussions.

Cromodata x Genmab

Genmab: Immuno-oncology / response to biologic therapies

Engagement Model & Timing

Step 1

Targeted Feasibility Sprint on 1 indication to size available responder-like profiles (project fee).

Step 2

Licensing of anonymized imaging + clinical context for that responder population (tiered pricing / bundle).

Step 3

Expansion into multi-country Enterprise Agreement for ongoing access and QA SLAs.

Cromodata x sanofi

Focus: Real-World Evidence for market access and positioning in LATAM

Objective

Generate region-specific RWE to support value & access, health economics, and post-launch differentiation in Latin America.

Sanofi Contributes

- Target conditions (e.g. Crohn's, UC, other inflammatory GI, or neuro focus).
- Market access priorities (which country first, which payer conversation first).
- Definitions of evidence gaps for HEOR.

» Cromodata provides

- De-identified, audit-ready RWD spanning outcomes, treatment pathways, adherence, and follow-up.
- Country-level evidence packs to support pricing / reimbursement / HTA-type discussions in LATAM.
- Speed: delivery in ~2 weeks, not 6–12 months.
- Regulatory & governance layer aligned with global pharma standards (HIPAA, GDPR, ISO-aligned).

Cromodata x sanofi

Focus: Real-World Evidence for market access and positioning in LATAM

Engagement Model & Timing

Step 1

Feasibility Sprint to produce an initial evidence pack for one therapy / one country (fixed-fee).

Step 2

Data Access / Licensing for expanded multi-country RWE bundles (tiered pricing per dataset/report).

Step 3

Enterprise Agreement to maintain refreshed evidence over the year (annual contract, custom SLA).

Cromodata x

Focus: Gastrointestinal / chronic inflammatory conditions (e.g. IBD) and neurosciences

Objective

Accelerate oncology clinical trials in Latin America by finding high-yield trial sites and validating eligible patient cohorts ahead of activation.

Takeda Contributes

- Target conditions (e.g. Crohn's, UC, other inflammatory GI, or neuro focus).
- Inclusion/exclusion criteria and endpoint definitions (flare rate, hospitalization, biologic switch, etc.).
- Deployment geography (which LATAM country first).

➤ Cromodata provides

- Longitudinal EHR + imaging + lab panels (inflammation markers, treatment escalation history, biologic response).
- Identification of clinics/hospitals with consistent IBD / GI inflammatory caseloads suitable for rapid startup.
- Structured anonymized datasets to analyze treatment patterns and durability.
- Fully auditable pipeline with least-privilege access and traceability.

Cromodata x

Focus: Gastrointestinal / chronic inflammatory conditions (e.g. IBD) and neurosciences

Engagement Model & Timing

Step 1

Feasibility Sprint (2–3 weeks) to size viable patient pools and rank candidate sites.

Step 2

Clinical Trial Site Selection engagement (project-based / success-fee per site recruited).

Step 3

Ongoing Data Access / Licensing for longitudinal GI / neuro datasets (tiered per cohort or per patient).
